Tip/Complaint:
From: (b) (6) Sent: Sunday, May 16, 2021 10:39 PM To: John Wirth ; ktollefson@ci.mequon.wi.us; Bruce Kress Ce: Rachel Orozco ; Jackie Wichert Subject: Perfume-y air pollution stink tonight 10:25 PM, Sunday, May 16, 2021 Bedtime, and I long to be able to crack my bedroom window for fresh air, but I cannot because of the heavy stink assaulting my property right now. Factories that outgas noxious odors usually do so late at night so as to avoid the complaints they would get if they did it during daylight hours when more people would be outside to be bothered by the air pollution stench. But, of course, anyone who is a lawyer for factories would know that. Please do the jobs you were elected and are paid money to do, and arrange for an odor inspector with odor capturing equipment to come to my house, so that this can finally get resolved. Unless, quite possibly, you don't want the source of the problem to be identified. (b) (6) Mequon, Wisconsin

Tip/Complaint: This complaint was emailed to Donna Howard on 5/10/21. From: (b) (6) Sent: Monday, May 10, 2021 11:51 PM To: (b) (6) ; ktollefson@ci.mequon.wi.us Cc: (b) (6) Subject: Sickeningly sweet perfume stench making it impossible to crack bedroom window 11:35 PM, Monday, May 10, 2021 The outdoor air had returned to normal when I turned the light off twenty minutes ago, and I was able to crack the bedroom window. Now, the air pollution stench has returned, horribly strong, and I am, again, forced to closed the bedroom window. My bedtime is very much disturbed, and access to fresh air is robbed from me. The source of this outgassing needs to be tracked down and ended! (b) (6) , Mequon, Wisconsin		Final Disposition: HQ Lead Number: FY21-224594-3714-CV Potential Violator's State: Wisconsin

Tip/Complaint: --5/6/21, ~8am, noticed an almost SWEET, FLUID-LIKE CHEMICAL throughout indoors and outdoors. It hurts the head. Drove to a nearby business; traces of it were in that business too. By ~11:30, tracked it to GUARDIAN WEST, where it was definitely strongest. It may still be occurring at the facility, not sure. But could someone please HELP WITH THIS. Very uncomfortable, and concentrates indoors. Smells very hazardous to health. SOURCE: GUARDIAN WEST (second toe) --5/3/21, ~1am noticed METALS and GAS ESOUS/CHEMICAL-LIKE pollutant. Started off a bit granular-like. It then turned into a hard wall of whatever it was in a blast of emissions, which is what SAE has been complaining about for some time now. It causes headaches, respiratory issues, etc. 5/4/20, ~5:56pm – same thing. Last SAE spoke to the 24/7 likely source, the likely source expressed no short-term plans to change their operation. SAE heard the word “years.” During the likely source’s strong emissions, it’s difficult to imagine residents taking another hour of them. It’s just not right to knowingly let this go on. LIKELY SOURCE: ABBOTT (the first toe to three-toed Big Foot)

Tip/Complaint:
Since the latter part of last week, NOXIOUS ASPHALT/PETROLEUM emissions were noticed. The pollutants were tracked to EMUSICOAT (4/24/21) If not mistaken, they started on 4/22/21: ~6am. 4/23/21: 1:30pm; 7:45pm still going; 11:29pm still going ... 4/24/21: 9:21am; 12:38pm; 8:32pm; 11:29pm; 1:10am ... 4/25/21: 6pm, much milder emissions. Personally, I'm about 1.7 miles from the company, and the emissions that CONCENTRATED indoors have felt excoriating. The head and chest hurt, and the throat that's already sensitive from ongoing paint emissions hurt as well. Emulsicoat is located only yards from homes. This owner/manager (of this apparent family-owned company of fewer than 15 that's affecting thousands) admitted a year or so ago in a phone conversation (before SAE began asking too many other questions) that a couple members of his OWN FAMILY had gotten illnesses because of that business. Also, the emissions are worse than just hazardous; its odors are so heavy that they MASK OTHER HAPs. So the risk to the public is much greater. For example, last night the decrease in Emulsicoat's emissions revealed other odors. Suddenly, there was something that could've been Guardian West (which may explain the throat pain); and there was another odor that strongly suggested ABBOTT. The likely ABBOTT odor was so strong that it felt tangible. Hurt the head as if it were a solid board of metal and **gas**. As thick outside as inside. SAE took a drive up Kirby and tracked it directly to ABBOTT. On a scale of 1-5, it was a 10. It was absolutely horrible by their plant and in the surrounding neighborhood, causing an eye reaction. Later that night, the metallic odor dropped off and what remained was the **gaseous**-something — frightening dioxide, maybe, and shockingly FAMILIAR. People slept in this **gaseous**-something all night – ABBOTT, ABBOTT, ABBOTT. Can something please be done today? Emulsicoat and Abbott. (ABBOTT MAY BE STILL OCCURRING; not sure; PLEASE CHECK.)
Thanks. SOURCES: EMULSICOAT; ABBOTT

Tip/Complaint: On 4/13/21, at about 5:25pm, an obscene amount of GAS and METALS were noticed indoors and outdoors. It seemed to be coming from the sewer/resident vent pipes. It was still going strong at 7:38pm, and so on. SAE eventually tracked it straight to ABBOTT POWER PLANT. Many residents, including infants, slept in this all night. Can someone please help with this. They shouldn't be able to keep doing this. (Also, why aren't they listed as a TRI facility? And why is their name buried in ECHO. Why?) Thanks.

Tip/Complaint:
Various noxious pollutants waft into homes daily here, or are shot in via the ventilation systems. Most of them stick around in various concentrations in corners and above dinner tables, couches and beds, blending in with the odors of the kitchen, toiletries, pets, popcorn, laundry, etc. On 3/29/21, at 12:32 pm, 1pm, 8:48pm, 10:06pm, 1:15am, and so on – just as the days, weeks, months before—bursts of pollutants, including STRONG METAL/METAL-LIKE POLLUTANTS, were noticed as they entered my own home. Last night and the night before, the METAL/METAL-LIKE POLLUTANTS were so bad I found myself opening and closing this and that door, wearing a bibbed hat along with a mask to try to protect myself from it. So along with pollutions being emitted from facilities' stacks, we have to be concerned with facilities' pollutant discharges linking to our own roof vent stacks that are only a few feet from our kitchen and bedroom windows, and our front doors. Given this concern, again SAE wonders whether these discharges are being pollutant-device controlled/pretreated properly? Is there a limited to the number of TRI facilities per square mile? Even if each is operating within regulations (which is certainly not always the case), couldn't the collective emissions and discharges increase serious health risks? Does EPA take this into consideration? Yesterday alone, the noxious odors varied from a strong sewer-like odor to petroleum-like vapors, and to a type of flat, bitter chemical with a mixture of something else (maybe **gaseous**); and by 10:06pm to very, very strong HEAVY METALS/HEAVY METAL-LIKE pollutants (w/a pressure to it and with that “something else” hanging around in part) which lasted throughout the night. So in the immediacy -- have the METAL emissions/discharges been investigated yet? And again, is there anything that can be addressed that may mitigate the sheer volume? It's one of the most CONSISTENT pollutants down here. Thanks. SOURCE: Likely UCSD (and TRI operations of metals, i.e., Guardian West, Abbott, Emulsicoat, WIRCO, Clifford-Jacobs)

Tip/Complaint: The other Bigfoot in the front and back yard of human residents: Abbott. For a very brief period, their emissions seemed reduced. But their toxic bitter, acidic, metallic odors seem constant again at various levels, and worsen at around midnight/1am. SAE has learned that the facility is burning more coal than gas , due to the colder weather and price increase in gas . And the cause and effect of the plant's emissions and health reactions (heart, back of skull, etc.) can be pretty clear-cut. Personally, I spent part of the weekend in the emergency room, which, of course, is noted. Besides the often-billowing stack emissions (nitrogen oxides, sulfur dioxide, particulate matter and mercury), they discharge to the public sewer systems as well, which explains a lot. Has this company been addressed yet? Can we get some help, please. The emissions are quite SCARY, and obviously we can't depend on the plant to care. Thanks. (By the way, on 3/4/21, ~11:12pm, an incredible amount of natural gas was noticed in the area and continued throughout the night.) Not sure if still occurring.

<div> <div>Tip/Complaint:</div> <div>1/31/21, ~1:15am, a NOXIOUS LEMONY, BITTER, gaseous/chemical odor was noticed outdoors and in concentrations indoors. And at around 2:40am, SAE began tracking the odor. The noxious odor was widely present. But of the locations driven to, the odor was strongest on Main Street, Lincoln Avenue, Florida, and Race Street (in Urbana); and on Kirby and on Oak (in Champaign), particularly on Oak by ABBOTT POWER PLANT. The noxious odor/emissions continued for part of the day at lower levels. This particular odor and an ODOR THAT USUALLY ACCOMPANIES the already noxious paint emissions are dangerous. As an SAE member and a resident, I can say this because a few years ago, a baseline for my heart was established. I was hooked up, tested and diagnosed with a perfect heart. “Pristine,” I was told. So, if this stuff can consistently tightens my chest, shoulder and neck and weakens my legs, then we wonder what it’s doing to the more vulnerable in this community, and how much pollution in general here has contributed to actual deaths. Moreover, how on earth are children bearing it? 1/31/21, ~11:15pm, a strong, sickening LIQUID-LIKE NOXIOUS CHEMICAL odor was noticed, similar to maybe a lighter fluid. And similar to what has been detected on East University. My kitchen and foyer, as well as other spaces were filled with it. It seemed to be emitting from the rooftop vent pipe. Not sure if emissions are still occurring or if current indoor levels are residue of initial emissions. IT WOULD BE A REAL RESCUE FOR OUR COMMUNITY IF ABBOTT IS ADDRESSED AS SOON AS POSSIBLE, AND THAT THE PAINT-ACCOMPANYING CHEMICAL IS UNCOVERED AND ADDRESSED AS SPEEDILY. SOURCE for the 1/31/21 lemony, bitter gaseous/chemical odor: Abbott Power Plant SOURCE for the chemical that oftentimes accompanies Guardian West’s paint: Guardian West (or possibly Abbott Power Plant) SOURCE for blend of chemicals: Not sure, possibly Guardian West primarily/UCSD Thanks.</div> </div>

Tip/Complaint: We are worried right now as this morning there is a really strong kind of natural gas odor and after investigating a bit we believe it is out of the paper mill down the street. There is a lot of pollution coming out of it floating our way but also a sharp gas odor as we are going towards it and I think they use that nowadays? Although shouldn't it be contained or something ?

Tip/Complaint: There's still a fair amount of PAINT HAPs emissions (and metals) indoors and outdoors. They are concentrating indoors and presenting some health concerns, especially in these winter months when homes can't be opened up as much. Last night the PAINT HAPs were horrible, and lasted all night. IS THERE ANYTHING ANYONE CAN DO FROM THERE IN THE NOW? There are some neighborhood people that are far more vulnerable than others. This is a real-life problem. Thanks. SOURCE: Tracked to Guardian West Tuesday late morning/midday (12/15/20). ----- *RE 12/15/20 SAE online complaint of " Gaseous /noxious petroleum-type odors," you may find more complaints on the HEUNA Facebook page (https://m.facebook.com/groups/heuna/). This community is being assaulted with air quality challenges left and right. And they seem to be coming primarily from two TRI facilities: Guardian West and Emulsicoat. We need help.

Tip/Complaint: Hey I don't know if this counts as an emergency or not but we are worried because there is a VERY strong natural gas odor coming from the paper mill in the immediate area surrounding it for the last few hours. (It may have been going on longer but that is when it changed to blowing our way. Like half a block away.) I know they use it as an energy source but it should NOT be this noticeable. I really don't want there to be another explosion or something under these twits.

Tip/Complaint: Problem Description: We frequently smell a strong chemical smell in our neighborhood. On the evening of 10/8 my partner and I woke up in the middle of the night afraid there was a gas leak. Opening the Nextdoor App, we learned the strong smell spread further than our neighborhood & that Viola was the suspected culprit. We were unable to fall back asleep for hours and there is no way, with the thickness of the stench, that it was not detrimental to our health. We often smell a dull version of this potent smell in the early morning hours as well but this overnight episode was unacceptable and unhealthy. Problem Timetable: 10/8 into 10/9 overnight. Tip/Complaint: Hello! I work at National Mini Storage on KL ave. (Seen on the map as Uhaul Neighborhood Dealer). Several times a week, we have this terrible horrible smell coming from whoever is across the train tracks from us. I don't know what they're doing up there or who they are. It smells like hydrogen sulfide or some other terrible offgas from something happening up there. There are a ton of residences in this area so we need to know what's up. I know this doesn't give you much information, but maybe if enough people take notice we can figure out what's going on because I leave work with a headache half the time. The yellow circle on the map gives as much of an accurate location as I can provide.

Tip/Complaint: This was a letter that was sent to EPA, Region 5 via Sara Breneman. October 05, 2020 Dear Sirs: RECEIVED OCT 3 0 2020 ECAD/CHEMICAL As an employee, I feel it is my moral obligation to inform you, anonymously, of my company, which is not compliant with any of the EPA regulations regarding working with refrigerant and performing large amounts of sealed system refrigeration repairs for the Whirlpool Corporation. They are not recovering refrigerant, keeping logs or re-claiming the gas back at the facilities. The only thing they are doing (if anything) is using old leaking plastic bags which leak out the contents before the end of their work day. Nothing is recovered, nothing documented I think you would find that most doing this work are just releasing the gas into the atmosphere. I do worry about global warming and the atmosphere so I hope your look into this. A surprise inspection of the facilities would confirm this. The company is Diamond Factory Service and they have 4 locations and several technicians doing this type of work. The main facility is: 2611 M 139 South, Benton Harbor, MI 49022 1540 Hecht Drive, Bartlett, IL 60103 342 Fee Fee Rd, Maryland Heights, MO 63043 2404 Beltline Hwy, Madison, WI 53713 Thank You claiming the gas back at the facilities. The only thing they are doing (if anything) is using old leaking plastic bags which leak out the contents before the end of their work day. Nothing is recovered, nothing documented I think you would find that most doing this work are just releasing the gas into the atmosphere. I do worry about global warming and the atmosphere so I hope your look into this. A surprise inspection of the facilities would confirm this. <p>Tip/Complaint: Just took my dog out at 9:45, and very heavy Kleen Test sickeningly sweet stench again assaulting my property. Eleven of 13 Sunday nights in a row at approximately the same time. I hope you can detect a pattern. All of you were either elected or hired to correct environmental assaults on Mequon residents. You are paid to correct environmental assaults. I'm one of the people who pays you. I did not sign up to be a victim or to have my property victimized when this factory was approved. You need to take responsibility —this factory leaks nuisance fumes. Do your jobs! Tenth of twelve Sunday nights in a row, Kleen Test factory's extremely strong, sickeningly sweet chemical odor drenching north and south sides of my house. I don't know what time it started or how long it will continue tonight. Last week it was at least five continuous hours in a row. Please inspect this factory, find source(s) of outgassing and have the leaks repaired!</p>

<p>Tip/Complaint: H2S gas smell all day long today 10/30/20 in a residential neighborhood with homes close buy. Smell burns my nose and creates headaches I should have to live like this for 1-2 barrels a day that's all this well site produces. EGLE is incompetent they allowed this to go on for over 30 years with little to no inspections. When I complained enough they finally inspected and found pages of violations yet this guy continues to damage the clean air around my home for 1-2 barrels are you kidding me? I have numerous witness stretching out over 34 years of the state of Michigan allowing this to go on and on</p>

Tip/Complaint:
From: Ruby, David Sent: Tuesday, October 13, 2020 11:34 AM To: R5Hotline Subject: Veolia Environmental Odor Concerns Hello, My name is David Ruby, and I'm an air pollution inspector with the Missouri Department of Natural Resources. We have been receiving a large number of odor concerns in the Southeast St. Louis area of Soulard, Benton Park, and Tower Grove. We've determined the odors are coming from across the river in Sauget, IL. I've spoken with the Illinois EPA and they are also receiving a high volume of odor concerns, and told me the source of these odors is Veolia Environmental Services, 7 Mobile St, Sauget, IL 62201, and that because Veolia has a federally issued permit, they are directing all concerns to the EPA. Let me know how you would like us to respond to these concerns going forward, and if there is a specific EPA contact that we can give them. I'm attaching all of the concerns that we received over the weekend to this e-mail. I will be replying to each concerned party that provided their contact information to let them know that I forwarded their concern to EPA Region 5. Please note that some of the concerns list a Missouri facility as the source of the odors. However, I've investigated the facilities in this area and have not observed any odors from these facilities, and I believe that Veolia Environmental Services is likely the source. There are also multiple concern reports from the same individual. Thank you, please find the concerns listed below. I will continue to forward concerns to this e-mail unless you prefer a different way. Concern #1894 Type of Inquiry Report an Environmental Concern Select a County: * St. Louis City Nearest City * St. Louis Date of Incident or Date First Noticed: Thursday, October 8, 2020 Please describe your concern. including the location on the property. Any contact or identifying (such as my neighbor, I work there, etc.) information provided is subject to release pursuant to the Open Records laws. * Toxic chemical smell in outside air. Please provide driving directions from the nearest town and road intersection to the location of the activity causing concern. * California Avenue, 63104 Responsible Party or Property Owner Name of Facility or Business which the concern is about: Unknown Follow-Up Communication All information is subject to release pursuant to the Open Records laws. If the concern is filed anonymously, we will not have your contact information for informing you of the outcome of the investigation or requesting additional information, which may be necessary to investigate the concern. Please be aware that we may not be able to conduct an investigation if you do not provide enough information. Remain Anonymous Concern #1893 Type of Inquiry Report an Environmental Concern Select a County: * St. Louis City Nearest City * St. Louis city Date of Incident or Date First Noticed: Wednesday, October 7, 2020 Please describe your concern. including the location on the property. Any contact or identifying (such as my neighbor, I work there, etc.) information provided is subject to release pursuant to the Open Records laws. * Strong acrid smell all over south city neighborhood while winds are blowing north. Most likely due to petro-chemical plant. This is repeatedly happening. Families with children live here concentrations are unsafe. Please provide driving directions from the nearest town and road intersection to the location of the activity causing concern. * south city neighborhoods, tower grove east and benton park west Responsible Party or Property Owner Name of Facility or Business which the concern is about: J.D. Streett & Company Contact unknown unknown Title unknown Facility Address: 3800 S 1st St Saint Louis City, Missouri 63118 United States Follow-Up Communication All information is subject to release pursuant to the Open Records laws. Tip/Complaint:
Just wanted to let you guys know that the paper mill got very quiet for a bit then right after began emitting some of the worst **gaseous** sulfur odors I've ever noticed there. You have to be close to the mill for this particular odor. Very sharp. Currently happening now.

Tip/Complaint: Sporadic noxious FUEL/FUEL-LIKE FUMES have been noticed in the area for the last 5-7 days. Saturday and Sunday, 10/11/20 and 10/12/20, they became more constant. SAE noticed lower levels at around 11am/noon that continued "throughout the day", and noticed them at higher levels that continued the "entire night". Interestingly, the same exact odor and pattern were reported by SAE on 10/11/19; and they were also reported on 10/8/18 (via email). So (1), this seems to be a scheduled activity for some source. And (2), it's a large source as the fumes covered "everywhere" SAE tracked in Urbana and Champaign. --On 10/11/20-- the fumes were detected as far as Springfield Ave. and Staley Rd. (Marathon Terminal) in Champaign. However, upwind of that location at Springfield and Rising Rd. the fumes were not detected. This may suggest that the fumes started at Springfield and Staley (at Marathon). During such emissions in the past, the fumes have simultaneously seemed more intense around Marathon's stations (that are now Circle Ks), suggesting that the fumes may have been associated with how the stationed were being supplied. --On the other hand, on 10/12/20 the fumes seemed much worse in Urbana. And the closer SAE got to Emulsicoat's Urbana location, the more the fume smelled like a component of the asphalt. At about a block away, the fumes began to smell like regular fuel again. BTW, the plant seems "very active" at this time. And there are several tanks on or along the rails on the plant's south side. Clouds of steam or something is spraying from the bottom of all of them, which may be normal. --Also SAE noted that the fumes seem as bad with winds from the south or southwest as from the northeast. So it could be a source unknown to SAE as well; or it could be Emulsicoat's, etc., fumes that have been pushed that way by being blown back; or it could be emissions from residents' roof stack pipe. Source: Not sure, but likely EMULSICOAT-- although Marathon "and" Emulsicoat would be good places to start w/any questions. The fumes have been concentrating indoors. They've been sickening, literally. For residents that can't easily detect **gases**, it's especially dangerous. It would be great if someone could help w/this right away. This is awful and unsafe for us. Thanks. (Not sure if occurring at this very moment.)

Continued Communication	Final Disposition:

<div>Tip/Complaint: Again, an INCREDIBLE AMOUNT of metal/metal-like emissions have been noticed in the area (outdoors and indoors the week of 9/28/20, especially during evenings of the past weekend and 10/5/20). Re SAE's 9/28/20 online complaint, concentrations seemed higher on a stretch of Main St. in Urbana nearest Emulsicoat. (Main is the east-west street immediately south of Emulsicoat.) Source: Not sure -- although SAE does have a theory. Tracking on 10/5/20 found metal/metal-like concentrations higher nearest Guardian West. Source: Probably Guardian West. Also, there has been a constant presence and very uncomfortable exposure to complex asphalt binder PAHs during the same period. Source: Emulsicoat. Sewer-like odor to tap water: 10/4/20, ~6:40pm; 10/6/20, ~9am. Source: UCSD. (Pls keep in mind that while these noxious pollutants—including the occasional sewer-gas type--may seem fine outdoors, indoors synergies and concentrations can be an entirely different story -- quite brutal and health-threatening.) (Not sure if/what may still be occurring.)</div>

Tip/Complaint: On 9/24/20, ~10pm, metals-like noxious odors were noticed, and shortly after that harsh asphalt, indoors and outdoors. The complex PAHs of asphalt continued into the middle of the night, causing a great amount of discomfort, as it had in many of the nights before (and one level or the other). Smelled like an oil and gas station trapped right in the home. Stomach-flipping, face-aching, headachy, nauseating odors. (Likely source for metal-like noxious odors, not sure) (Likely source for asphalt, Emulsicoat)

Tip/Complaint:
The smell of petroleum products (**gas**oline, motor oil, antifreeze) has been an increasingly and prevalent stench in the area, enough so to where it's now becoming an alarming degree. Recognizing the type of operation this business performs, i can understand there may be a slight hint of petroleum every so often. HOWEVER, the stench seems ever present now and i am very concerned there may be dumping/spilling of these contaminates (either intentional or otherwise) occurring at this location. As this is a rural community, my immediate concerns center around the ground water that services the many surrounding homes in the area. I do not wish for anything more than assurance that the natural resources of ground water and soils are being respected and protected.

Tip/Complaint: 9/6/20 ~7pm, strong METALS were detected in Savoy, IL, also in the north part of Champaign. (Source: not sure.) 9/11/20: the PAHs of ASPHALT noticed over Champaign-Urbana, IL on Friday, particularly. The inescapable, noxious odors stretched all the way to Savoy, at least. In spots of concentrations indoors, it caused headaches and face aches. (Source: likely Emulsicoat) 9/12/20: ~8:30pm, the scary HAPS of very strong PAINT and maybe some other sharp chemical were noticed indoors and outdoors. It was detected: on Broadway, Vine, very strong at Vine and University, on University, very strong at University and Guardian Dr., on Lincoln, Green, weak at Neil and Kirby, very strong at Kirby/Florida and Lincoln, on Race, very strong at Race and Florida. Exposure very uncomfortable w/respect to breathing, and great long-term health concerns. (Source: very likely Guardian West; UCSD processing) On 9/13/20, the community was exposed to another soup of hazardous odors, which caused a great amount of discomfort and great concern of long-term health risks. ~9:15pm, more PAHs of head and face-aching ASPHALT were noticed indoors and outdoors. It was tracked to Emulsicoat (~10pm). (Source: Emulsicoat) ~12midnight, bad SEWER gas was noticed. Horrible on Broadway, University, Main, etc., and tracked to UCSD (~2:25am). (Source: UCSD) ~12midnight, horrible PAINT HAPs noticed indoors and outdoors on Urbana streets and tracked to Guardian West (2:25am). Lasted ALL night long. Could be still occurring, but not sure if odors now are just residual. (Source: Guardian West) WE NEED HELP.

Tip/Complaint: (b) (6) is running a tree service business in resident where he lives, neighbor at (b) (6) is taking in all fumes from commercial vehicles and him and his family are smelling the diesel and gasoline every morning that they start up vehicles for work. People are not educated and I am a friend helping them with this issue. It's already been reported to local inspectors but they said 30 days for them to remove everything, no guarantee that they are going to move vehicles and everything but 30 days is too long because of air pollution for the family. Can you please contact me will give more details, that is a bad situation for someone to have to deal with fumes from commercial vehicles everyday. Thank you for your time.

Regional Tip and/or Complaint

Tip/Complaint:
I initially placed a complaint on 7/7/20, I recieved an email on 7/31/20 stating my issue had been forwarded for further review. I have emailed several times to follow up in addition to leaving a voicemail on a recording noting that I would receive a f/u call within 24 hours and never have to date. My family and I continue to listen to the very loud oil well on our property everyday, in addition to smelling the **gas**/exhause off of the Well that is never well maintained unless I report to IDNR. IDNR has been of more help than anyone but their hands are tied from hear on out concerning the smell/sound. I do have rights, I should not go into debt paying attorney fees to fight for my rights. I am tired of hearing and smelling this well on our property and the oil company (Patrick Webb, LLC) getting by with it day after day that has turned into month after month and now year after year! I should not have to succumb to there level to have something done about this, I understand that Covid has slowed everyones process down, I am an essential worker in healthcare so I completely understand this; however, the absent of any representative to follow up with me is uncalled for. I will attempt to upload a small clip of the sound we get to hear everytime we leave our house. The most frustrating part of this whole process is that this particular well owner has gotten away with so much; ignoring attorneys, ignoring land owner rights, scheming people out of money and yet he still gets away with so much or should I venture to say he BUYS himself out of so much!/?

Tip/Complaint: Noticed mild sewer gas this morning at about 6:30am. Noticed it again at about 2:30pm. Mild outside, but stronger indoors and burns chest. Tracked it to UCSD. Suspect it will worsen tonight, which can feel excoriating to the respiratory system. It would be great if someone could look into this before day ends. Thanks.

Tip/Complaint:
I notice high volume officers ems around a trucking company out back thing is all day there been harmful **gases** it seems filling the air that rattles the brain and hurts my chest the oxygen seems be gone and i feel heat when its cold outside there miswind directions and its constant ince epa leaves it returns again these culprits are on power struggle

to bother us residents and epa when epa comes out they leave then return in morning our chest hurts from some unknown unbreathable gas misty out in front entire property i seen chem trails in sky again there computer hackers that usually mess with trucks cb and maybe sending foul information to create a mess the trees leaves should have residue and the surround plants in the area (b) (6) .they stuffing roof vents over and over so we will complain to epa. the police sit in corners telegraph and theres a small group in and out chateau blvd simultaneously dumping that something dangerous in the air.

Tip/Complaint:
At about 11:24am on 8/12/20, heavy metals/metal-like emissions were noticed. By 7:19pm and 9:47pm, the metals were stronger and there was a persistent chemical-like sewage smell. At around midnight, the sewage issue was tracked to Urbana-Champaign Sanitary District. It was sewer gas. The odor got stronger indoors and very uncomfortable as the night crept toward day. How could the UCSD not be aware when such a problem is happening? Have they considered what's causing it? Also, occasionally (like the morning of 8/12/20), the drinking water has a faint smell of sewage as well.

Tip/Complaint: The weekend, starting with Friday, included intermittent mixes of sewer gas , asphalt and metal/metal-like noxious odors at varying levels during the day, and worsening in the evenings. On Saturday between ~5:45pm and ~7:15pm, sewer gas could be smelled from UCSD (east on Univ.) going west on University, and all the way north on Neil to at least Marketview Drive, and going back east on I-74. Sunday, the sewer gas was noticed at around 8pm. It was horrible on Kerr, and literally smelled like decaying remains, rust and chems./ gases . (No wonder a resident said she thought all the odors were coming from the graveyard ... and refuses—on a miniscule budget—to drink any city water.) Emulsicoat, who's also in the front and backyard of the community (which still blows some of our minds), absolutely contributed significantly to the noxious emissions with its very harsh, complex asphalt compounds. And of course, there were the metals/metal-like emissions tucked inside it all. Again, all of this hazardous crap concentrates in the home, especially in the middle of the night. If it's not these emissions, it's others like thick, hazardous paint fumes, solvents, etc. While some of this has been normalized to some residents, it doesn't negate the fact that they, including their children/infants, ARE breathing these toxins, which exposes them to very real risks. Friday and Saturday night were a nightmare. At times, no safe place in the home to go. It should be criminal! Does EPA have any tools besides relying on some of these self-interested sources to do the right thing and to tell you when they're doing the wrong thing? More regular inspections plus swifter testing or long-term/continuous monitoring, maybe? Is there anything SAE can do to help you to help us to breathe more safely? Is anyone out there? Can someone help our community in a 'meaningful way' with this now. It seems that these guys have come to feel that they can operate however the heck they please because by time EPA acts, if at all, etc., etc.

Tip/Complaint:
The company has been running an illegal paint line operation at the Lodi OH wash and fill facility for a number of years. Management made the decision at some point to remove the paint line in the facility for reasons I am unaware of. Instead of replacing it or painting the propane cylinders in a facility with a properly maintained paint line, they chose to use massive amounts of spray paint. They are painting thousands of cylinders a week at the facility and have use the spray cans to hide the fact they're running an illegal paint line. There are times where that facility has bought all the spray paint Fastenal had available. Management is aware the practice is illegal and detrimental to health of the employees, but feel Amerigas is such a large company, they are above the law.

Tip/Complaint:
Strong too extreme, mold/mildew smell inside building. Ongoing 6+months **Gas** station provides water,soft drinks, food Concern 1)Food and drink may contain mold spores on exterior wrapping. Concern 2)**Gas** station had 2 employees working at a time breathing suspected contaminated air. The workers are potentially breathing in mold spores for the duration of their shift unknowingly carrying spores back to their residence. Reporting as intentional because of how long the issue has been present without remedy. Recent health violation against speedway is: mouse droppings. I am just a once in a while customer of this **gas** station and I'm concerned for the health of the workers. I'm asking that someone please test the air .

Tip/Complaint:
Observed EMP truck driving on highways consistently spewing out thick black exhaust into the air while driving on July 14, 2020. It seemed like the truck was on fire it was so intense. Individual vehicle owners have to regularly pass emissions testing. The truck has no business being in operation dirtying our air with damaging particulate matter, greenhouse **g**ases and likely carcinogens that lead to countless illnesses in humans and more. I have a 6 second video (well less than 32MB) and photos that your site will not except. The license plate is from Tennessee: (b) (6) . Additionally, this ID is located above the license plate: (b) (6) . This information can be verified in a photo.

Regional Tip and/or Complaint - Indiana
Recipient:
Regional Tip and/or Complaint

Tip/Complaint:
I live next door to a trailer park that has been condemned for over a year or longer. It has been a health hazard with fires, mold, unknown gas smells, and hundreds of feral cats that lived under these trailers urinating everywhere etc. Most recently there have been unprofessional "workers", in unmarked vehicles, "sawing" and ripping apart these trailers, WITH NO PERMIT. (b) (6) My immediate concerns are the debris that fly through the air. These trailers are OLD, like 1950, and may contain asbestos. I work in my yard and have had issues of burning in my chest and eye infections since this began. Also, all the rain we have had pouring over this possible contamination could effect my water supply if the trailers do contain hazardous materials such as asbestos. This trailer park is a possible danger to the air, land, water and our health to everyone that live in the surrounding areas, such as myself. The unidentified "workers", that are different everyday, wearing no protective gear, or covering flying debris, are also at risk along with myself, and the surrounding neighbors. I do have pictures on my phone, but I do not know how to load them from my lap top. I have names and numbers of people I've contacted in the past to help me. The police were called out July 2nd, 2020, but I do not know the outcome of that visit but I am sure there is a report. I am putting in this report that it is not an emergency, only so that I can send this to you now, but I am also following up on Monday with The National Response Center. This place has been a danger for far too long and I have been afraid to say anything because of the repercussions from them, but I feel my health has been effected for years with this trailer park and now with the UNPROFFESIONAL demolition of this property. I am afraid for my health and that of my neighbors. I was told one trailer remains due to the person living in it having COVID, but these trailers have been uninhabitable for years so I do not know how anyone could live in it. I am also going to contact a lawyer for further advice on this matter. I also want to mention that when speaking with (b) (6) Planning Commissioners office last week, he told me he ordered them to "cease" in the tearing down of the trailers until he can look more into this after the holiday. They continued tearing down, at which time I called him again. He told me he contacted them again, and I was told "they misunderstood" and will now "cease" in removing the remaining debris until this is further investigated. My worry is that this will all "disappear" and I will not know what hazardous materials those trailers contained and my health outcome and the damage to my property. My property was also damaged by a pipe that had busted and flooded my basement, so as you can see, this has been an emotionally and mentally anguishing situation for me for a very long time. Thank you for your time.

Tip/Complaint: Yesterday (6/23/20) at about 7:25pm, paint or paint-like odor that was emitted the night before began again. This time, I tracked over to Guardian West’s Guardian Way (street) and didn’t detect much. However, the odor could be detected briefly on University in front of UCSD, and detected sharply on Kerr St., which is behind (north of) UCSD. I continued on to the U of I campus and the odor morphed into a similar odor (maybe, maybe gaseous ?). That odor was considerably more strong and consistent there – on Goodwin, Fourth, Green, etc. Also, the odor was not detected on Vine from University Ave until ‘suddenly’ at Main and Vine, and Illinois and Vine, and along Race Street, etc. The strange odor lasted up to about 1:20am (6/24/20) when the odor distinctly switched to heavy metals. Both concentrated in the home and caused health issues and concerns. Are the University’s big-foot coal-fire power plant, Abbott, and pretreatment in general being addressed? And is there anything that can be done immediately to help the community? Thanks.

Tip/Complaint: At about 4pm yesterday (6/21/20), heavy metals fumes were noticed indoors and outdoors. By 9:10pm the heavy metals were very concentrated and very uncomfortable and worrisome with respect to short- and long-term health risks. Every room in the home was occupied with it. I don’t know how the more vulnerable in the community (infants, etc.) could fare now or in the future with such continued assault. Suddenly at about 12:55am (6/22/20), the odor changed to a HEADACHY paint fumes. These HAPs then concentrated in the home and continued into the morning. -The source for heavy metal fumes seemed to be Abbott Power Plant. -The source for the paint seemed to be Guardian West. -In each case, the emissions seemed to be present regardless of wind direction; so it’s possible that the odors were, at least in part, sewer discharge operations and were emitting from sewer/resident home rooftops, which could mean there may be serious pretreatment problems. THE PAINT FUMES MAY STILL BE OCCURRING, OR COUD BE LEFT OVER FROM EARLY MORNING HOURS. (BTW, bad sewer gas on 6/21/20 was tracked to UCSD at about 9:30am, and was by then stronger on Kerr) . There had been a sporadic problem in the days before, mostly in early morning hours.)

Tip/Complaint:
On 6/16/20, heavy metals were noticed at low levels most of the afternoon, as on most days. Then at about 5pm, the odors increased indoors and outdoors. By 10pm, the pollutant was off the chart. The concentration throughout the home was incredibly uncomfortable. At about 1:28am (6/17/20) the odor was tracked and found to be very strong on streets in Urbana (Michigan, etc.) and also somewhat more heavy and consistent on the U of I campus, but downtown Champaign as well. At Coler and University going east, the odor suddenly changed to a strong sewer **gas**, which increased considerably in route to Urbana Champaign Sanitary District. The noxious sewer **gas** continued to a certain point on South Vine St. in Urbana. (Actually, sewer **gas** has been an on and off problem over the last week, at least. At one point, it was found to be very strong, for some reason, at Main and Vine in Urbana, and toward campus.) Overall, the metals pressures caused health issues and serious health concerns. Not sure if the odors at this moment means that the emissions are still occurring or that the odors are remains from last night. Can we please get some help with this. Thanks.

Tip/Complaint:
I believe the surrounding dumps are releasing toxic **gases** into the air at night while everyone has gone inside for the night. The smell is very strong and creeps into this house. One night it was so strong I thought there was a hidden fire in the home. It sickened me. I did not sleep that night at all. My son had been out and when he came home said it stinks outside. Then he said the smell was stronger in the house. So, we both thought there could be a hidden fire. Around 5:00 am I let the dogs outside. I could smell it outside. When I brought the dogs inside the smell was ON their fur. That's when I knew the smell was not coming from the house. But, rather coming to the house from the outside air. What ever is getting airborne is dropping on our lawns and then our pets are sniffing it and getting it on them. The smell was so bad on my dogs I had to give them baths. But, it is STILL HAPPENING AT NIGHT. I let the dogs outside this morning at 5:00 am and I could smell it. I also smelt it last night. This is on going. I am having allergic reactions to it too. It is negatively affecting my breathing and my throat is getting raspy. And my sinus are bothering me. I do not have fever. This is not a virus. This is some kind of an allergy. My eyes also itch and feel like they are burning at times. I have to use eye drops to relieve it. My mom is 97 years old and she in home bound.

What comes into this house she has to breathe. The one dump sight put in a line that is suppose to eliminate odors. Well, what ever it is they added chemicals to break down the odors. Well, I think that is only aggravating the problem. We dont need more chemicals added to go air borne. They are collecting too much dump and cant control their emissions because of it. I had to put my Yorkie down April 8th. She had gotten a cancer in her gut. Could she have ingested or breathed in toxic chemicals from the dump and gotten the cancer from that? I think its possible since I KNOW it is getting on my dogs fur coats. You should of seen what happened to her. Her tummy looked like it would explode. She did not want to die. She coward up to me as close as she could when the vet put the anesthesia in her iv to put her to sleep. That was the hardest thing I have ever had to do with a beloved pet. Since this is getting on our lawns I can only believe it can seep into the ground and get into our well water. We could all be being poisoned. Something needs to be done. They should not be collecting garbage from all over. They dont have the means to keep us safe from their hazardous emissions. And shame on our leaders here who allowed this happen to us. Any help with this would be appreciated. Lives could be poisoned because of these emissions. What happens here could save lives. Thank-you.

Tip ID # 206423 Date/Time Received: 06/11/2020 - 10:12:00 AM Submitter: (b) (6) Subject: Regional Tip and/or Complaint - Illinois Recipient: Regional Tip and/or Complaint	Alleged Violator: Enviro-Safe Refrigerants, Inc. 400 Hanna Drive Pekin, IL 61554 Pekin, , Illinois 61554 (Region 5) Alleged Violator Latitude / Longitude: Tip Image / Video Link: Date of Violation: Violation still occurring?: yes Notified state DEP/DEQ?: no	Intent: Intentional Type: Falsified Media: Air Documents Entity: Company	Directions to site:
	HQ Lead Number: FY20-206423-3714-CV Ref. Lead Number: AECAB Case Number: N TOPINKA	Message Referred To: Region Credible Threat: Priority Term: Language:	Lead Status: Lead Closed Lat: Lon: Category:

Tip/Complaint:
To: The United States Environmental Protection Agency Date: 6/4/20 Enforcement and Compliance Office Concerning: Enviro-safe Refrigerant marketed as a replacement for R-1234yf It has recently come to our attention that Enviro-safe Refrigerants, Inc. of Pekin, IL has started marketing a refrigerant replacement for vehicles using R-1234yf. Going to their website (<https://www.es-refrigerants.com/>) and searching for r1234yf shows several products for sale listed as: Arctic Air for R1234yf. Looking through the safety data sheets provided on their website, this is a product comprised of approximately a 50/50 blend of Propane and Butane; two highly flammable **gases**. We have considerable safety concerns for both consumers and service technicians regarding the use of Arctic Air for R-1234yf. Section 612 (Significant New Alternatives Policy) strictly prohibits flammable refrigerants (other than R-152a and R-1234yf) from being used for new and retrofit MVAC systems. When R-152a was SNAP approved it required the use of a secondary loop AC system to prevent the refrigerant from being used directly in the cabin. Arctic Air for R-1234yf is significantly more flammable, requires less energy to ignite and releases much more energy in combustion than R-152a. As you are aware there were significant, multiyear, industry wide studies completed to insure the safe use of R-1234yf in vehicles. After eight years of use in the EU and North America, R-1234yf has an impeccable safety record based on that work and an industry dedicated to developing safe products. Arctic Air for R-1234yf is directly marketed to be a replacement for R-1234yf and has the potential to damage the excellent safety reputation of R-1234yf, which could slow the industry's conversion to low Global Warming Potential (GWP) refrigerants. Arctic Air for R-1234yf violates several other portions of the SNAP rulings. SNAP requires that all MVAC refrigerants have unique fittings. Arctic Air for R-1234yf uses the standard R-1234yf fitting which may contaminate the supply of R-1234yf in the aftermarket. All vehicles are required by SNAP to identify and label which refrigerant is used in the MVAC system. The use of Arctic Air for R-1234yf as a replacement refrigerant for R-1234yf makes no attempt to warn or identify it for consumers or service technicians. In some offerings, Enviro-safe markets a conversion hose that allows the refrigerant to be used to connect directly to the vehicle's R-1234yf unique fitting. The Arctic Air for R-1234yf can use the same connection as the R-134a can, creating a tool for retrofit of R-1234yf systems (with either refrigerant) which is a violation of the SNAP ruling. Finally, Arctic Air for R-1234yf is not SNAP approved and has never been studied in a risk assessment as required by SNAP. In summary, Arctic Air for R-1234yf violates many aspects of the SNAP program and most concerning puts consumers and service technicians at a safety risk. This risk is made more severe since it doesn't even meet the SNAP requirements identified for a refrigerant with significantly less flammability (R-152a only with a secondary loop). We are requesting that the EPA Enforcement and Compliance Office take immediate action against Enviro-safe refrigerants, Inc. to prevent any safety issues that could physically harm consumers and service technicians. As stated above we are also concerned that any safety issues based on the use of this refrigerant could slow down the global acceptance of low-GWP refrigerants. Respectfully (b) (6)

Tip/Complaint: At around 3pm Thursday, 5/14/20, a load of some type of noxious, acidic gas /chemical was noticed outdoors and in increasing concentrations indoors. The headachy odor seemed to have a maybe foamy/fizzy quality. It changed into some other headachy gas /chemical that continued throughout the night. Can someone pls help with this so that the community doesn't have to be exposed to it this weekend. Thanks.

Tip/Complaint:
Noticed sewer **gas** from UCSD late yesterday (5/12/20). Worsened last night, and at ~2:50 am (5/13/20) it was tracked over to East University Ave and UCSD. Same chest-burning odor is detected now, but not sure if it's odor retained from earlier or if it's still occurring. Concerned for children and the more vulnerable population. Thanks.

Tip/Complaint:
Friday night (5/8/20), there was an enormous amount of natural gas fumes emitted, stretching over the town. Again, it seemed strongest on the U of I campus and adjacent streets – Green, Nevada, Springfield, Goodwin, Fourth, University, Vine Street, etc. Interestingly, no metals were detected during that time. The gas was so strong OUTSIDE on Springfield between Fourth and Goodwin that it was difficult to focus on driving when passing through. And yes, the fumes were also heavily concentrated indoors. This was very especially concerning since the general public can't readily detect natural gas. Saturday (5/9/20) -- same emissions. And SAE understands that Abbott copped to a "small leak." If they were the primary source, SAE is surprised that they could call what had happened and what was still happening to a large extent a "small leak." This is not the first time this volume of natural gas has been dumped on the public here. Sunday, the prominent pollutant changed back to heavy metals. Some pollution will kill you over time; some will kill you on the spot. It would be great if this could be addressed as soon as possible. Thank you.

Tip/Complaint: At about 7:15 this morning, a concentration of natural gas was noticed indoors; the gas was noticed outdoors as well. There also seemed to be traces of metals present, which could have been remnants from the heavy metal emissions/discharge from the night before. Of the places tracked for the natural gas, the U of I campus smelled the strongest. It was reported to Ameren, but SAE thought it should also be part of EPA's records. This is not the first time this year that Abbott has been suspected of a natural gas issue.

Tip/Complaint:
We still have a lot of heavy metals in the area. The night of 4/16 or 4/17 at about 9pm was horrible and, later, included a sort of waxy paint odor with a type of hard headachy chemical underneath. Saturday night, 4/18/20, sewer **gas** was noticed during the day, starting at about 1pm. It blended in with -- and at about 9pm seemed to be replaced by - heavy metals. Sunday night, 4/19/20, heavy metals were noticed again at about 9/10pm and later blended with and was replaced by a strong headachy paint HAPs that caused issues with the throat.

Tip/Complaint: The morning of 3/17/20 at 4:30am, a sharp chem/paint fume was noticed and concentrated indoors. Most people at that hour, as usual, slept through the hazardous exposure. At about 5:30 that afternoon (3/17/20), a distinctively SWEET CHEMICAL was noticed. It also concentrated indoors. Then at about 7pm, the odor seemed mixed with METALS and included a SEWER GAS , which smelled and felt corrosive to breathe. The SEWER GAS quickly grew stronger and burned the chest. This harmful odor continued THROUGHOUT THE NIGHT. At about 3:30pm, 3/18/20, METALS were detected and concentrated indoors The same for PAINT at about 11pm. Early morning hours (3/19/20), SEWER GAS began to concentrate again and burn the chest. It's still seems to be emitting from the sewer at this time. Perhaps due to winds, it was detected the strongest on Kerr (street north of UCSD). Can the community get some relief at least from the sewer gas at this time. Thanks.

Tip/Complaint: Guardian West uses paints, solvents and heavy metals in its production. Since the latter part of last week, and now this week, uncomfortable levels of its emissions continue to concentrate in the home from outside. Yesterday (3/9/20) at about 6pm a solvent-like CHEMICAL entered indoors from outdoor, which got strong enough to cause facial pain on contact. It remained until about 10pm when an INCREDIBLE AMOUNT HEAVY METAL emissions concentrated strongly indoors, which caused headaches and a sort of eye pressure. By 2/2:30am, the odors seemed to change to a hellish mixed, and then change again – to sewer gas . THIS HAS BEEN THE ROUTINE. (Honestly, we don't know how infants could survive any of this ALL NIGHT LONG.) Again, SAE understands that heavy metals can cause upset in the anaerobic digestion of municipal sludge. So perhaps these Guardian West and UCSD noxious pollution problems are RELATED. Can someone please look into these bursts of toxic emissions from Guardian West and look into how they may be related to the sewer gas problem, all which present serious health risks. (Not sure if the odors are still occurring or if the current detection is the residue from last night.)

Tip/Complaint:
GLR Advanced Recycling is on 12600 Stark Rd. They are knowinely lettine Freon in the air from the cars they bring in. They let customers bring in refrigerators that are not tagged that says no Freon. They have oil ,gas, antifreeze from cars draining into sewer system. E.P.A nightmare. They also have other locations that you need to check out. Very concerned about the Freon Name: (b) (6)

Spotlight Air Environmental (SAE)

Subject:
Regional Tip and/or Complaint - Illinois
Recipient:
Regional Tip and/or Complaint

Tip/Complaint:
Strong HEAVY METAL emissions from GUARDIAN WEST have been going on for nights and days. Of course, it occurs usually in the middle of the night, then often continue through the morning and some period after that. Also, SEWER **GAS** has been emitting from URBANA CHAMPAIGN SANITARY DISTRICT for nights and days as well. Yesterday late, it was a problem. And last night it was more noxious than ever. It caused physical reactions like chest burning, etc. Certainly not healthy for nearby residents—young and old—who may be immune to smelling it by now, but not immune to its health impact. (This is not the first reporting of UCSD sewer **gas** in the last few weeks.) SAE understands that heavy metals can cause upset in the anaerobic digestion of municipal sludge. So perhaps these Guardian West and UCSD noxious pollution problems are RELATED. Can EPA look into this. This is challenging here and concerning. Thanks.

Heavy h2s gas smell coming off from tank battery at corner of 66th Ave and Adam's Pentwater, MI. Blowing right to my house. Heavy smell penetrating my car and home. Tank battery name is warren/johnson 3t I contacted eggle in Michigan multiple times this is a residential area with homes it's a continuing problem and past few days it's heavy gas smell. Eggle has worked on inspecting these sites but they are still dumping a lot of gas on my home and property and the neighbors. It's very unnerving and scary. Please help

Tip/Complaint: They are demolishing a 100 year old business next to a restuarant and the air all around and at the gas station next door is full of dust particles. I can only imagine that dust is getting into the restaurant and settling on the food. The man operating the machinery does not even have a face mask or any kind on. No attempts at dust control are being used. This is a large well known company that does house demolitions, so they should know better. If they do this here in a highly populated area, they probably do it on all their job sites.

Tip/Complaint:
I have reported strong odor to the **gas** company before. They said they often get complaints and believe it is the factory on Lycaste. Today I woke up to the fire department at 7 am because the neighbor said it smelled of **gas** so strongly. DFD said DTE is often called to the area to check. My elderly dog has developed nasal cancer. I often wake up coughing. My neighbors and I are considering legal action. We also live near the Fiat Chrysler Plant. They are expanding, but this issue has preceded their expansion. I cannot personally pinpoint the source. But the odor is strong and at the same time, always early in the day.

Tip/Complaint: We just moved to this area but have noticed a "odorized natural gas -like smell" outside of the home and surrounding area (which includes miles surrounding our home). We have called the gas company as have others and they tested the air and said that there was no gas leak. I notice the smell particularly on Fridays / Saturdays. I feel very ill when I step outside my home and breath the air or if I drive in this area during periods of this odor. I have children and I am worried for their safety and health. I am not sure if this is coming from fracking or from a BFI waste management near the area. I am not sure if there are any nearby fracking sites.
